

Vulnerability

Exploit

```
int permissions;  
char name[100];
```

// 0 → guest, 1 → user,  
2 → admin  
:

When you find a vulnerability:

- tell owner/programmer
- sell on black market
- publish it - in news
  - on CVE
- benign exploit
- look deeper
- make money

1. tell program/owner
2. wait
3. publish
