

Unrecoverability

Exploit

```
int permission; // 0 - guest  
                // 1 - user  
                // 2 - TA  
                // 3 - prof  
char name[100];
```

What should you do when you find vulnerability?

- Exploit it
- Sell it
- fix it (if it's my code)
- give to company for bounty
- ransomware
- mine bitcoins
- collect them
- tell code owner
- Benign exploit

1. tell owner

2. wait

3. Publish - CVE
- media
