

Using Multiple Views of a Document Collection in Information Exploration

Allison L. Powell, James C. French
Department of Computer Science
University of Virginia

CHI'98 Information Exploration Workshop, April 19-20, 1998

Introduction

- **Traditional text-based searching sometimes frustrating**
 - Searchers may be unfamiliar with collection vocabulary
- **Utilize multiple viewpoints of a document collection**
 - term-based and topic-based
 - readily available and intuitively useful

Introduction (cont.)

- **Move among viewpoints to refine searches**
- **Use relevant documents located in one view to bootstrap exploration of alternate views**
- **Document relationships may be more apparent in one view than another**

Proposed User Interaction
