

If you really cannot find a Window PC, an alternative is to install VirtualBox on Macbook and request an EC2 Windows instance on AWS.

- It is NOT recommended
- Only try this when you have no choice
- Request public IP addresses for both PMs to enable remote connection from the EC2 windows instance
- On Ground: register MAC address of the two PMs at <http://netreg.virginia.edu/>
- Restart the two PMs

To request EC2 instance, you need to create AWS account.

Create an AWS account

1. Create a free account on <https://aws.amazon.com/>.
2. Apply for AWS Educate here <https://aws.amazon.com/education/awseducate/apply/> -- free \$40 credit for students. Do NOT select the option "AWS Educate Starter Account". Note that YOU will be responsible for paying for AWS! \$40 should be enough with careful usage for all the programming assignments.

Please apply ASAP! Normally, it will take more than one day for the application to get approved.
