Reading from Internet

CS 1111 Introduction to Programming Spring 2019

File Processing (Local)

File Processing (Internet)

Opening Files (Internet, via URLs)

import urllib.request

```
url = some-url-to-the-file
stream = urllib.request.urlopen( url)
```

```
for line in stream:
    decoded = line.decode("UTF-8")
    print(decoded.strip())
```

Summary

- Read from files -- Must know (based on exam2 topic list, as of 03/27/2019)
 - open(filename)
 - connection.read()
 - connection.readline()
 - ways of iterating lines
 - connection.readlines()
 - connection.read().split('\n')
 - for line in connection
- Read from the Internet -- Must know (based on exam3 topic list, as of 03/27/2019)
 - import urllib.request
 - urllib.request.urlopen(url)
 - stream.read().decode('utf-8')
